The Data Observability Imperative: Quality, Reliability, and Performance

Best Practices Series

When recently asked what business priorities are most important to the data management efforts at their organizations, increasing operational efficiency was the top answer given by DBTA subscribers followed by improving decision making and automation. How do they plan on achieving gains in these areas? For the majority, the path to achieving agile, data-driven operations lies in building better trust and understanding by data consumers. Right now, our readers are telling us that data quality and data governance are their top focus areas for improving data management.

Not surprisingly, gaining better visibility into the sprawling data ecosystems of today's organizations is essential to moving the needle here. After all, as the saying goes, you can't improve what you don't measure. To ensure that data is flowing properly through various data pipelines, processes, and workflows—and that data is accurate, consistent, and meets quality standards—you need the ability to understand and monitor data throughout its lifecycle.

It's from these challenges that the concept of data observability rose to prominence and is quickly gaining traction as a combination of tools, practices, and organizational culture. To help IT leaders and data teams navigate the key technologies and strategies for achieving effective data observability to drive improvements in data quality and data governance, DBTA is publishing a special report in September 2024.

"The Data Observability Imperative: Quality, Reliability, and Performance," will be marketed to more than 100,000 qualified subscribers at organizations across North America. Sponsors get to promote their solutions in the report and receive all the leads produced from downloads, fully screened and cleansed.

A COMPLETE MARKETING PROGRAM IN ONE SPECIAL SECTION OF BDQ

Entrée to our audience and leads

Your sponsored essay, white paper, or case study abstract will be published in the September edition of *BDQ* magazine preceded by a full-length introductory article by our editorial experts; there will be extensive distribution both in print and online.

Generate leads for your sales force

- All requests for the PDF version housed at dbta.com will be driven through a registration form capturing complete contact and qualifying information.
- DBTA will enhance the distribution of your content in the Best Practices Series via online, email, and email newsletter advertising directed to more than 150,000 information management professionals in organizations across North America through its unique subscriber and affiliate network.

Your editorial topics can be wide ranging:

- Third-party white papers and white paper abstracts
- Successful customer case studies
- Your company's unique value proposition or market position
- A behind-the-scenes look at your technology solution and why it's important

Editorial and production services included

DBTA magazine will take care of all the copy editing, layout, and design. And a PDF of the final article will be provided at no extra charge.
